Says

What are people say about agriculture in India? What are people say about crop production in India?

The agriculture sector is one of the most important industries in the Indian economy.

Approximately 60 percent of the Indian population works in the industry, contributing about 18 percent to India's GDP.

India is the top producer of milk, spices, pulses, tea, cashew and jute, and the second-largest producer of rice, wheat, oilseeds, fruits and vegetables, sugarcane and cotton. In spite of all these facts, the average productivity of many crops in India is quite low.

Thinks

What are people think about agriculture in India? What do we think about agriculture as profession?

Agriculture is a crucial sector of the Indian economy, employing a significant portion of the population and contributing to food security and rural development.

Agriculture as a profession is both important and valuable, playing a crucial role in feeding the world's population and contributing to the overall well-being of society.

Crop Production analysis

Farmers perform a wide range of tasks to manage and maintain their farms. These tasks can vary depending on the type of farming, the location, and the specific crops or animals being raised.

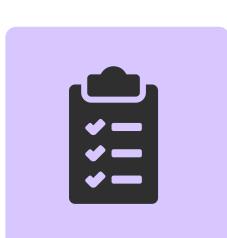

Observations in agriculture are essential for assessing the state of food production, environmental impact, economic development, and societal well-being.

In recent years, there has been a growing emphasis on sustainable and environmentally responsible agriculture. Agricultural professionals are working to develop practices that minimize the environmental impact, conserve resources, and promote biodiversity.

It's important to recognize that the feelings and opinions of farmers about pesticides are diverse and can evolve over time. Many farmers are open to adopting more sustainable and environmentally friendly practices as they become more informed about the potential impacts of pesticides.

Feels

How people feel to sustain in agriculture? What farmers feel about pesticides?

Does

What behavior have we observed? What can we imagine them doing?
